

Testing Composables in Android Jetpack Compose

Saurabh Pant

@saurabh30pant

in in/saurabpant

Course Introduction

```
Composable function
```

```
@Composable
fun ProfileEdit() { ... }
```

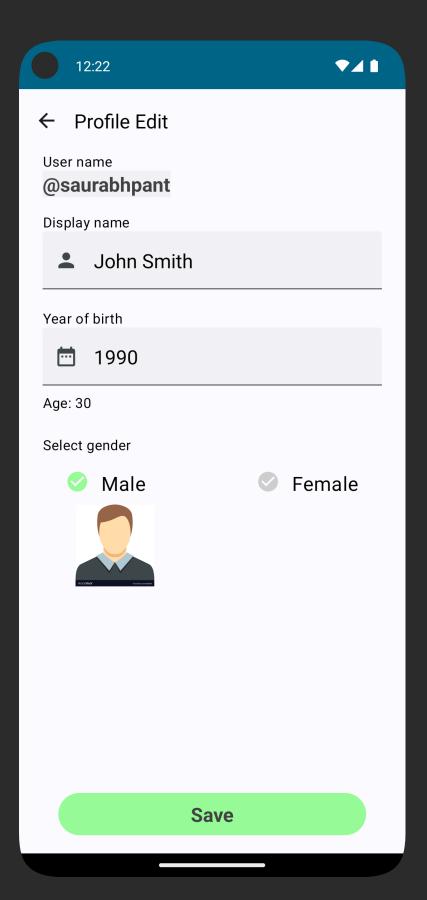

Dependencies

```
Finder APIs
Assertion APIs
Action APIs
```

Run + Validate

What Are We Going To Test?

Steps to Testing

- Set up the test environment
- Create the test class
- Add Compose Rule
- Set up @Before and @After annotation
- Write test cases
- Run and Validate test cases

Let's Get to the Code

Download the Starter Project

Link given in the Study material section of Course Content

Setting up the Environment

Add dependencies & Create test class

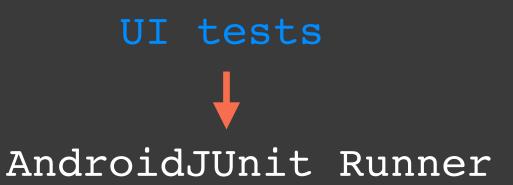

AndroidTestRunner

Responsible for running our tests and providing us the results

Local tests

JUnit Runner

Create Test Class

Add Compose Rule

Set up @Before and @After annotation

Write test cases

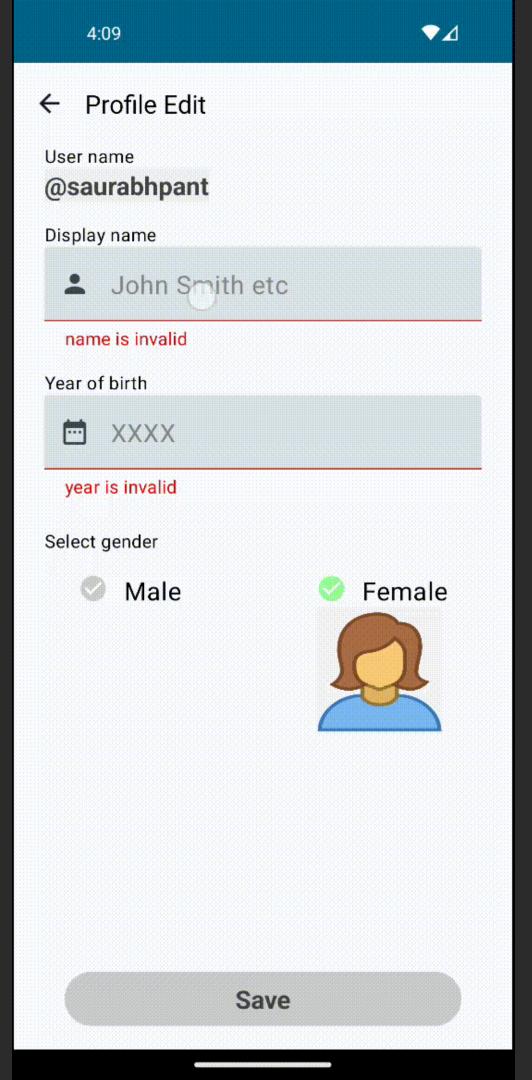

Run and Validate test cases

Code Challenge

Code Challenge Solution

Learnings

- Set up required for creating a test environment for composables
- Different APIs available for testing composables
- Terms associated with testing
- How to run and validate test cases

Congratulations!

Until Next Time...
